FAKENIX

AI-Powered Deepfake Detection & Digital Forensics

DEMO / SIMULATED ANALYSIS. This result was produced by the application's demo mode. No AI model analysed this media. The verdict, scores and indicators below are illustrative placeholders and must not be relied on for any decision.

Report ID	**FX-RPT-2026-002**	Generated (UTC)	**2026-10-09 06:34:56**
Report Type	**Forensic Analysis Report**	Generated By	**FAKENIX System**
Evidence ID	**FX-2026-00002**	Detection ID	**det_sample_suspicious**

Detection Result

VERDICT: SUSPICIOUS

Simulated demo result — no model analysed this media.

Manipulation likelihood	**47.4%**
Authentic complement	**52.6%**
Risk level	**MEDIUM**
Analysis type	**Simulated demo result — no model inference was run**
Model	**None (stored label: "DEMO ANALYSIS (simulated)")**
Provider	**None (no inference provider was called)**

These values were simulated by demo mode and measure nothing about this media.
How to read these values. *Manipulation likelihood* is the analysing model's own 0–100% estimate that the media is fake (0% = certainly real, 100% = certainly fake). It is a self-reported judgement, not a statistically calibrated probability and not an error rate. *Authentic complement* is 100% minus that value; it is not a separate measurement. *Risk level* is derived from the likelihood (below 30% low, 30–70% medium, 70% and above high, 95% and above critical). The *verdict* is the model's own classification; an answer whose verdict contradicts its likelihood is recorded as SUSPICIOUS.

File Information

File name	**sample_scene.png**	File size	**2.7 KB (2,756 bytes)**
Media type	**Image**	Filename extension	**.png**
Detected format	**PNG**	MIME type (detected)	**image/png**
Dimensions	**640 × 480 px**	Uploaded (UTC)	**2026-10-09 06:34:56**

File size, detected format and MIME type were measured by FAKENIX from the stored file bytes for this report. The file name and its extension are as supplied by the uploader.

Evidence Integrity

SHA-256 (recorded)	`d2936cb9b6d620ebf33e6ae55c925f7bf2a506df0646b89222c280c7f7c10c66`
MD5 (reference only)	`dcc96d539b93a7432d6a81eb8810c7b2`
Hash recorded (UTC)	**2026-10-09 06:34:56**
Verification for this report	**MATCH — the stored evidence file was re-hashed on 2026-10-09 06:34:56 UTC and its SHA-256 equals the recorded value.**

A matching hash shows only that the file held by FAKENIX is byte-for-byte identical to the file that was hashed when the evidence record was created. It does not show that the media is genuine, unedited, or was unaltered before it was uploaded. MD5 is listed for cross-referencing only and is not collision-resistant.

Recorded handling event	Recorded by	Time (UTC)
Uploaded	Sample generator	2026-10-09 06:34:56
Analyzed	FAKENIX AI Engine	2026-10-09 06:34:56
Evidence Hash Generated	FAKENIX System	2026-10-09 06:34:56

These events are logged by the application itself. They are not cryptographically signed or independently witnessed and do not constitute a complete legal chain of custody.

Simulated Indicators

Indicator	Simulated strength	Severity
Placeholder indicator	48%	MEDIUM

Source: Simulated by the application's demo mode. Not produced by any model and not measured from the media.

Analysis Observations

No written observations exist for a demo result.

Source: Demo mode; no model produced observations for this media.

Limitations

- This is a demo result: no analysis of the media took place. The verdict, likelihood and indicators are simulated placeholders.
- File metadata can be absent or deliberately altered. Missing EXIF data is common for media shared through social platforms and is not by itself evidence of manipulation.
- Hash verification covers the file as received by FAKENIX. Nothing in this report establishes where the media came from or what happened to it before upload.

LEGAL DISCLAIMER: This report is generated automatically by FAKENIX software for investigation support, awareness and research. It is not an official government document, a certificate of authenticity, or expert testimony, and it does not by itself establish that any media is genuine or manipulated. Findings should be reviewed by a qualified human examiner before being relied on in legal, disciplinary or other consequential proceedings.
